

Marine & Stationary Power Remanufactured Component and Hardware / Gasket Kit offerings.

Our **Remanufactured Component Solutions** enable customers to have their serviceable components refurbished (Repair & Return) or exchanged (Unit Exchange) with corresponding certified OEM quality replacements. In either case, units go through a comprehensive teardown, requalification, and assembly process that ensures remanufactured units perform on par with corresponding new units. Additionally various kits are also available to support regionalized component rework and efficiency. [And new as of November 2023 Wabtec is collaborating with Channel Partners to conduct regional refurbishment offerings using Wabtec OEM components and specifications.](#)

Available at an attractive price when compared to the cost of new units, Wabtec certified remanufactured component solutions (and kits) extend the life of the component, restore original performance, and support environmental sustainability through reduced waste.
